

# Končar D&ST Green Energy

**Končar D&ST** is dedicated to the rational use of natural resources through constant improvements in the energy, environmental and economic performances of our own production. Efficient and rational consumption is ensured through conscientious and continuous energy management and initiative taking.

In accordance with our firm commitment to sustainable development, a 1.1 MW photovoltaic electric power plant was built on the roofs of the production halls, covering about 30% of the total annual power consumption, thereby reducing CO<sub>2</sub> emissions by a total of 480,532.80 kg per year.

In addition to the above, Končar D&ST is a proud user of the HEP Opskrba ZelEn mark. The ZelEn mark is a guarantee confirming that 100% of the electricity that Končar D&ST buys, in addition to its own electricity, is also produced exclusively from renewable energy sources, which additionally affects the reduction of CO<sub>2</sub> emissions.

**This is part of our corporate social responsibility to contribute towards the reduction of emissions, and a further part of our continued efforts to preserve the environment.**
